Alias: catalyst 8154, polyurethane delayed catalyst 8154, delayed catalyst 8154, polyurethane catalyst 8154

Polyurethane delayed catalyst 8154 is a chemical, mainly used for molding polyurethane foam, water-soluble tertiary amine composite catalyst with delayed catalysis, specially designed for the production and processing of seat cushions such as automobiles, for long-lasting pouring time and increase The open-cell foam structure works well.

use:

NT CAT8154 is mainly used to promote the reaction of urethane (polyol-isocyanate), which has the effect of delaying the initiation of the reaction;

NT CAT8154 is mainly used for polyurethane molded foam, prolonging milking time, improving fluidity and improving processing efficiency of foam.

8154 has a delayed blowing effect, which makes the milky time increase, and it is especially suitable for complex mold grooves that require a long time to cast. It can keep the foamed plastic products for a long time without decay, and the foam has good cell opening.
